REASONS FOR ALLOWANCE

Claims 1-25 are allowed.

The following is an examiner's statement of reasons for allowance: The present invention is directed to a content recording/reproducing apparatus for controlling the recording and reproducing content limited in viewable period.

The following is a statement of reasons for the indication of allowable subject matter: The independent claims 1, 13, and 25 are identifies the uniquely distinct feature for “wherein the recorded content includes a plurality of frames and each frame has a corresponding viewable period that is obtained by subtracting a first value, corresponding to the combination of a current time and a time needed for starting reproduction, from a second value, corresponding to the combination of the viewable period and a recording time of the frame”

Jerding et al, US 7,010,801 discloses an invention provides a method for an interactive media services system to provide media to a user through an interactive

media services client device. The client device is coupled to a programmable media services server device. The method includes the step of implementing an interactive media guide. Additionally, the client device is implemented to present the interactive media guide to the user. A system operator is provided an interface to the programmable media services server. Control options are provided within the interface to allow the system operator to configure a plurality of rental options available to the user. Finally the interactive media service system is implemented such that the plurality of rental options can be executed by the user in a requested active media session.

Itagaki et al., US 5,828,417 discloses a television receiver includes a unit for controlling program reserve, a storage unit for storing previously remocon codes of an external picture recording apparatus in a memory of the control unit, an output terminal for outputting the remocon code corresponding to a predetermined function at a predetermined time, and a wire unit having one end connected to the output terminal and the other end to which an infrared ray signal emitting portion driven by the remocon code output is connected, and operates in such a way that in response to an instruction issued from the program reserve controlling unit, the remocon code corresponding to the necessary function is output from the remocon code storing unit to drive the infrared ray signal emitting portion, and an output of the infrared ray signal emitting portion is received by a remocon light receiving portion of the external picture recording apparatus, thereby enabling the picture recording reserve in the external picture recording apparatus to be controlled.

Hirayama et al., US 6,028,979 discloses a reproduction apparatus is designed to select and decode speech and subtitles (characters) in a given language from a disk on which various types of information are recorded in different languages. This system arrangement makes it possible to standardize the manufacture of disks and reproduction apparatuses world-wide, resulting in a reduction in production cost. In a disk 100, various types of information are recorded in different languages along with video information. A reproduction apparatus selects information in a given language from the reproduced information using a data string processing section 203, a system control section 204, and an operator section 205, and supplies the selected pieces of information to each of a video processing section 206, a subtitle decoder 211, and an audio processing section 213.

None of the prior art, either singularly or in combination, fails to anticipate or render the above underlined limitations obvious. Claims 2-12, 14-24 are dependent on claims 1 and 13 and therefore dependent claims also allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
